

Effect Sizes

Effect size is a standardized measure of the *relative size of the gain (or loss)* of a structure.

0.00 or less = Negative effect
0.00 – 0.20 = Negligible, unclear effects
0.20 – 0.40 = Small-moderate effects
0.40 – 0.60 = Very strong effects
0.60 – 2.00 = Extreme effects

These are just one way of understanding the value of educational/classroom factors. There are others.
